Citare (autor, an, titlu)	Date / sursă	Metodă	Metrică	Rezultat
1. Hriscan et al. (2021). Meteorological Characteristics Associated with Air Pollution in Bucharest Greater Area, Romania.	RNMCA, București	Analiză meteorologică; corelații	Indicatori privind eliminarea aerosolilor	Precipitațiile pot reduce particulele fine.
2. Roșianu et al. (2022). Six-Year Monitoring of Atmospheric Pollen and Major Air Pollutant Concentrations in Relation with Meteorological Factors in Bucharest, Romania.	Poluanți și meteorologie, București	Corelații Spearman; sezonalitate	Coeficient Spearman	Asocieri meteorologice variabile în timp.
3. Yang et al. (2017). The Relationships between PM2.5 and Meteorological Factors in China: Seasonal and Regional Variations.	68 orașe din China	Corelații sezoniere și regionale	Coeficienți de corelație	Vântul este adesea asociat negativ cu PM2.5.
4. Olvera Alvarez et al. (2018). The Value of Using Seasonality and Meteorological Variables to Model Intra-Urban PM2.5 Variation.	Stații din El Paso, SUA	Modele cu efecte mixte	Corelații; semnificație statistică	Vântul și temperatura scăzute pot coincide cu PM2.5 ridicat.
5. Huang et al. (2015). PM2.5 Spatiotemporal Variations and the Relationship with Meteorological Factors during 2013–2014 in Beijing, China.	PM2.5 și meteo, Beijing	Analiză spațiotemporală; decalaje temporale	Coeficienți de corelație	Vântul din ziua precedentă este relevant.
6. Nguyen et al. (2024). An Exploration of Meteorological Effects on PM2.5 Air Quality in Several Provinces and Cities in Vietnam.	8 provincii și orașe, Vietnam	Convergent Cross Mapping	Coeficient ρ	Relațiile diferă între anotimpuri.
7. Yang, H., Peng, Q., Zhou, J., et al. (2020). The unidirectional causality influence of factors on PM2.5 in Shenyang city of China.	Poluanți și meteo, Shenyang	Pearson; path analysis	Coeficient Pearson	Vântul este frecvent asociat negativ cu PM2.5.
8. Omokungbe et al. (2020). Analysis of the variability of airborne particulate matter with prevailing meteorological conditions across a semi-urban environment using a network of low-cost air quality sensors.	5 locații semiurbane	Regresie liniară multiplă	R^2, RMSE	Temperatura și vântul explică doar parțial variația PM2.5.
9. Zhao et al. (2018). Short period PM2.5 prediction based on multivariate linear regression model.	PM2.5 și meteo, Beijing	Regresie liniară multiplă	R^2	Modelele sezoniere pot îmbunătăți estimările.
10. Saiohai et al. (2023). Statistical PM2.5 Prediction in an Urban Area Using Vertical Meteorological Factors.	PM2.5 și meteo, 2015–2020	Corelații; modelare statistică	Pearson	Asocieri negative slabe cu vântul și temperatura.
